

GREEN-API Test Console

Static HTML page for testing GREEN-API methods.
Built as a test task for the DevOps Engineer position.

Stack

- Vanilla HTML / CSS / JavaScript
- No build step, no dependencies
- Single file (`index.html`)

Implemented methods

Method	HTTP	Description
<code>getSettings</code>	GET	Fetch instance settings
<code>getStateInstance</code>	GET	Get the current state of the WhatsApp link
<code>sendMessage</code>	POST	Send a text message to a chat
<code>sendFileByUrl</code>	POST	Send a file by its public URL

All requests are made to:

```
https://api.green-api.com/waInstance{idInstance}/{method}/{apiTokenInstance}
```

How to use

1. Create an instance in your [GREEN-API console](#) and link it to your WhatsApp number (QR code).
2. Open the deployed page (see link in submission email or run locally — just open `index.html` in a browser).
3. Paste your `idInstance` and `ApiTokenInstance` into the corresponding fields.
4. Click `getStateInstance` to verify the link is authorized.
5. Enter a phone number (digits only, with country code, e.g. `77001234567`) and a message, then click `sendMessage`.
6. To send a file, enter a phone number and a public file URL, then click `sendFileByUrl`.

Run locally

No build required:

```
bash
```

```
# any static server works  
python3 -m http.server 8080  
# or  
npx serve .
```

Then open <http://localhost:8080>.

Deployment

Deployed via GitHub Pages from the `main` branch (root).
